

During 2018, we took on two of the largest projects in Brasstech history - with the goal of positioning ourselves to meet the growing sales and capacity demands of the company.

Those two projects were; relocating and expanding our metal finishing department, and, decommissioning our old Great Wall PVD machine and installing a new Vapor Tech PVD machine.

We are pleased to let you know that we have completed both of our major upgrades to plating and PVD, **and, as of TODAY, we are returning to standard lead times!**

These two projects were nothing short of herculean efforts and our hats are off to Kevin Welker, Ricardo Gutierrez, Ponce Sisavath, Carlos Ortiz and Sal Flores along with a host of teammates.

All of us at Brasstech want to thank you for your efforts during these major projects. Please note, starting TODAY, March 19, we will remove any notifications of extended lead times and will continue with our standard published lead times of:

Newport ReadyShip @ 1 week

Newport Non-ReadyShip @ 4 weeks Valves @ 1 day

Ginger @ 1 week
