## I-SERIES

To Our Valued Distribution Partners:

Rinnai is pleased to announce the official launch of our new **I-Series Condensing Boiler Line**. Earlier this year, Rinnai presented this unique and competitive product line at the International Builders Show and the AHR Expo.

Attached is an overview of the **I-Series Condensing Boiler Line** that highlights several key benefits of this innovative boiler line:

- **The Combi models have the ability to simultaneously produce home heating and domestic hot water:** Home heating and hot water at the same time!
- **Precise control of domestic hot water temperature is controlled by a Servo-Based Temperature Controller:** Less than 2-degrees in hot water

temperature fluctuation!

- **High Domestic Hot Water production:** Over 5gpm of hot water with the i120CN!
- **Zero Governor Gas Valve with Switching Venturi for ½” gas connections and fluctuating gas pressures:** Dependable operation under a wide variety of applications!
- **Built-in controls to operate multiple heating zones:** No need for external controls for 2-Zone operation!

Just like Rinnai’s revolutionary **SENSEI™ Condensing Tankless Water Heater**, the **I-Series Condensing Boiler Line** has made installations simpler and less expensive. With a compact design that is lightweight and easy to install, the **I-Series** also has the most venting options with all popular venting materials, including vent runs of 65’ with 2” PVC!

Pre-orders are being accepted now with inventory available for shipment in July. Orders will be supplied on a FIFO, based upon order receipt.
