## Product Specification Update

From: Marketing Dept. at Stiebel Eltron, Inc.

We have upgraded all the aerators on the entire Mini™ line. The new aerators all feature an upgraded spray patterns, and have been subtly branded.

The Mini™ 2-1 and Mini™-E 2-1 now ship with a 0.35 gpm aerator, replacing the 0.5 gpm aerator. This will improve performance of these low-kW units.

The Mini™ 3.5-1 and Mini™ 4-2 now ship with both a 0.66 gpm and a 0.5 gpm aerator. In many Northern regions with cold incoming water the warm water output at a sink will not be hot enough with a 0.66 gpm aerator. If this is the situation, the installer can simply switch to the 0.5 gpm aerator, which will increase the temperature roughly 8°F more than the 0.66 gpm aerator. This should provide enough boost.

And a reminder, a while ago we began supplying all Mini™-E 6-2 units with one 1.0 gpm aerator plus two 0.5 gpm aerators. The 1.0 gpm aerator should be used when a single sink is plumbed. If the Mini™-E 6-2 is installed to supply warm water to two sinks, then the 0.5 gpm aerators should be used.

If you have any questions concerning this update, please don't hesitate to contact us. We are happy to assist you. As always, we appreciate your time and business. Thank you.
