1. Fewer damages, fewer delays, and lower repair costs

On average, a bathtub is moved, handled, or transported at least 5 times before its finally installed. That is a lot of opportunity for damage. Cast iron and steel tubs are notorious for easily getting chipped and needing repairs. Acrylic has superior durability. Meaning damage is less likely to happen during shipping and handling and less likely to delay your project, considerably lowering repair costs.

1.03%

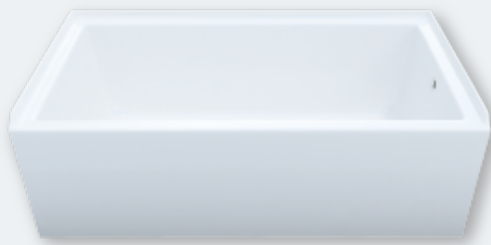

The percentage of Jetta acrylic tubs that needed cosmetic repairs due to shipping and handling damage in 2018.

2. Easier to Install

Did you know that, on average, a cast iron skirted tub weighs a hefty 300 lbs?

That's **TWICE** as much as our light-weight, high-impact acrylic skirted tubs. A lighter weight product is much easier to be moved into position and installed.

3. Upgrading to acrylic is good for your customers

In addition to the logistics and installation benefits, our acrylic tubs provide benefits to both the builder and homeowner. Our Loft collection is designed to provide that clean modern look new home buyers desire.

In addition to its aesthetic appeal, the Loft collection boasts a minimal tub deck to maximize the bathing well. All of our skirted acrylic tubs are easier to clean and do not fade or discolor over time.
