

IT'S EASY TO CLEAN AN ACRYLIC BATH

Bath owners are pleasantly surprised at how easy it is to clean their Jetta acrylic surfaces. When you deliver or install their new bathtub, sharing a few simple cleaning tips can prevent damage from cleaning and prolong the life of the tub. Invite your homeowners to use simple household dish detergent, and let them know that harsh cleaning compounds with ammonia and bleach are not necessary.

This simple step will generate goodwill with your clients, and reduce warranty/service calls for damage done by chemical cleaners.

All you need is
a soft cloth and
liquid dishwashing
detergent

Use a soft cloth and liquid dishwashing detergent to clean the surface of the tub. A Magic Eraser works well on stubborn marks.

Light scratches and abrasions may be removed and the original gloss restored by using a light polishing compound.

Using a damp cloth, rub in small circles until scratches or abrasions are gone.

Wipe with a dry cloth until the original gloss is restored.
